DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 4-5 are allowed.

RE claim 1, while, Fujinami et al. disclose of the array speaker system in which a plurality of speakers units arranged in an array are supplied with signals having prescribed time differences, said array speaker system comprising: a delay memory for delaying an input signal; a control means for calculating delay times to be applied to the signals respectively supplied to the speaker units and means for supplying the delay imparted signals to speakers.

However, None of the prior art of record disclosed of the specific wherein: an interpolation processing means for performing interpolation processing for outputting delay-imparted signals based on the input signals from the delay taps of the delay memory , wherein the interpolation processing means includes two multipliers for multiplying outputs of two of the delay taps from the delay memory by coefficients supplied from the control means and an adder for adding outputs of the two multipliers with respect to each speaker unit, and wherein the control means divides the calculated delay time by the sampling period, and selects the two delay taps from the delay memory on the basis of a position corresponding to a division result so that outputs thereof are supplied to the two multipliers, to set the coefficients for performing linear interpolation based on the division result with respect to the multipliers

Similarly, Re claims 5 has been analyzed and allowed for incorporating the similar limitation as in claim 1.
